Although epidemiologists work in field settings in different contexts, the term field epidemiology as used in this manual describes investigations initiated in response to urgent public health problems. A primary goal of field epidemiology is to guide, as quickly as possible, the processes of selecting and implementing interventions to lessen or prevent illness or death when such problems arise.

Defining Field Epidemiology | Epidemic Intelligence ...

Epidemiologic field investigations are a core function of epidemiology and perhaps the most obvious way information is transformed into action to ensure public health and safety (see Chapter 1). This chapter describes the step-by-step process required in performing an epidemiologic field investigation.

Conducting a Field Investigation | Epidemic Intelligence ...

The CDC Field Epidemiology Manual is a definitive guide to investigating acute public health events on the ground and in real time. Assembled and written by experts from the CDC as well as other leading public health agencies, it offers current and field-tested guidance for every stage of an outbreak investigation—from identification to intervention and other core considerations along the way.

CDC Field Epidemiology Manual

Cases are customarily organized in a table called a line-listing (Table 6.1) (2). This arrangement facilitates sorting to reorganize cases by relevant characteristics. The line-listing in Table 6.1 has been sorted by days between vaccination and onset to reveal the pattern of this important time-event association.

Describing Epidemiologic Data | Epidemic Intelligence ...

Epidemiology is the study of diseases in human populations. Often diseases will “break out” in certain areas and field epidemiologists are called in to identify the source of the outbreak and institute measures to bring it under control. This is a very challenging job as such research is often hampered in a number of ways.

When a new infectious disease is discovered, scientists called epidemiologists work with other scientists to find who has it, why they have it, and what CDC can do about it. From the beginning of the COVID-19 outbreak, scientists at CDC and around the world have been working to identify the source, monitor and track the disease, study the disease and develop guidance for actions to slow the ...
