Ebooks on Google Play Books are only available as EPUB or PDF files, so if you own a Kindle you'll need to convert them to MOBI format before you can start reading.

### **Das Buerger Syndrom Thrombangiitis Obliterans**

Thromboangiitis obliterans, also known as Buerger disease (English / b ɜːr g ə r /; German pronunciation: [ˈbyːɐ̯gəʁ]), is a recurring progressive inflammation and thrombosis (clotting) of small and medium arteries and veins of the hands and feet. It is strongly associated with use of tobacco products, primarily from smoking, but is also associated with smokeless tobacco.

Buerger's disease is a rare disease of the arteries and veins in the arms and legs. In Buerger's disease — also called thromboangiitis obliterans — your blood vessels become inflamed, swell and can become blocked with blood clots (thrombi). This eventually damages or destroys skin tissues and may lead to infection and gangrene.

## **Buerger's disease - Symptoms and causes - Mayo Clinic**

Buerger's disease was first described as a "presenile spontaneous gangrene" by Dr Felix von Winiwarter in 1879. It was later termed thromboangiitis obliterans by Dr Leo Buerger in 1908. It is an inflammatory disorder that affects small- and medium-sized vessels in the extremities, particularly the hands and feet.

Buerger's disease, or thromboangiitis obliterans, causes blockages in the blood vessels of your feet and hands.

## **Buerger's Disease: Causes, Symptoms, and Treatments**

Thromboangiitis obliterans (Buerger disease) is caused by small blood vessels that become inflamed and swollen. The blood vessels then narrow or get blocked by blood clots (thrombosis). Blood vessels of the hands and feet are mostly affected. Arteries are more affected than veins. Average age when symptoms begin is around 35.
