Before digital photography, we had to wait until we developed the film to know for sure whether we got a good exposure when we made an image. Now, by using the histogram, this information is at your fingertips before you take the shot (in cameras with Electronic Viewfinders), after you take the shot, and during post-processing as well.

Histograms for Beginners - Digital Photography School

Digital photography uses cameras containing arrays of electronic photodetectors to produce images focused by a lens, as opposed to an exposure on photographic film. The captured images are digitized and stored as a computer file ready for further digital processing, viewing, electronic publishing, or digital printing. Until the advent of such technology, photographs were made by exposing light sensitive photographic film and paper, which was processed in liquid chemical solutions to develop and
