Download Nodularis Prurigo Manual Guide

Prurigo nodularis (PN) is an uncommon, chronic skin disorder affecting primarily older adults and is characterized by symmetrically distributed, multiple, firm, pruritic nodules (picture 1A-B). PN occurs in patients with chronic pruritus and is frequently associated with a history of atopic dermatitis [1-3]. PN will be discussed in this topic.

UpToDate

Prurigo nodularis (PN) is a skin condition in which hard crusty lumps form on the skin that itches intensely. PN may itch constantly, mostly at night, or only when a light brush of clothing sets off a round of severe itch. For many, itching only ends when the PN is scratched to the point of bleeding or pain. A PN sore is hard, and usually about a half inch across.
