a situation in which one or more of the upper teeth or cusps close inside (lingual to) lower teeth or cusps during occlusion.

Orthodontics- malposition of group of teeth Flashcards ...
Dental malposition occurs when jaw alignment is normal but one or more teeth are out of normal orientation. When dental malposition or skeletal malocclusion causes trauma to other teeth or oral soft tissues, the condition is termed poorly functional or nonfunctional and treatment is indicated. Therapy options include moving or removing the offending or offended tooth or teeth, or surgically creating additional space for the malpositioned tooth to occupy without causing trauma.
