139. ... His investigation was successful, largely because any such (irreducible) local system is rigid in the sense that it is globally determined as soon as one knows separately each of its local monodromies. It became clear that luck played a role in Riemann's success: most local systems are not rigid. ...

139. Book Description: Riemann introduced the concept of a "local system" on $P^1 - \{a \text{ finite set of points}\}$ nearly 140 years ago. His idea was to study n th order linear differential equations by studying the rank n local systems (of local holomorphic solutions) to which they gave rise.
